

Cybersecurity Awareness Training Platform

Objective:

To develop an interactive platform that educates users about essential cybersecurity best practices.

Functional Requirements

1. The system shall allow users to register and log in securely.
2. The system shall provide interactive learning modules on cybersecurity topics.
3. The system shall simulate cybersecurity scenarios such as phishing attacks.
4. The system shall conduct quizzes and evaluate user performance.

Non-functional Requirements

1. The system shall be easy to use with a simple and intuitive interface.
2. The system shall ensure fast response time during user interactions.
3. The system shall be reliable and available for continuous learning access.
4. The system shall maintain user data privacy and basic security standards.

Description:

- Design an interactive web-based platform to educate users on essential cybersecurity best practices
- Uses **gamified scenarios** to simulate real-world cyber threats such as phishing, malware, weak passwords, and social engineering attacks
- Includes quizzes, challenges, and levels to reinforce learning and keep engagement high
- Provides instant feedback and explanations to help users understand correct and incorrect security behaviors
- Aims to reduce human-error-related security risks by promoting safe digital habits
- Targeted for students, beginners, and non-technical users to build foundational cybersecurity knowledge.
